About Me

Passionate solution seeker always eager to discover new technologies, learn and never stop evolving.

Being involved in all the phases of development have taught me the importance of time, resource managing and doing things right. Additionally my sysadmin and developer background provided me with a unique skillset that makes me able to fit in most of the roles of developing a new product.

Projects

acmotos

acmotos.com

motorcycle gear and accessories ecommerce

With **Prestashop** as the base I've added numerous features and fixes to fit our needs for the shop, both by coding standalone modules and overwriting core functionality.

Additionally, I've made a backoffice with **Python** that integrates and syncs the product stock with the providers, and automates tasks that are tedious or impossible to do within Prestashop.

Being that this project is live, I also manage the hosting and everything related (CDN, Deployments, etc). *There is planned a migration to Scaleway's **kubernetes** in the short term.*

Design, marketing and most of the non-technical duties are managed by my partner [Iván Sol](#).

Experience

Hexad

<https://hexad.de/>

Fullstack Kotlin Developer

2020 - Current

Innovative and future-oriented service provider, Hexad GmbH is active in the areas of company portals, mobile applications, software development, agile project management and software testing.

Add features and fix bugs on the **REST** spring boot based backend.

Front: **react** **reactnative** **jest**

Back: **kotlin** **spring-boot** **hibernate** **mysql** **mongodb**

VCS: **git**

CI: **concourse**

Architecture: **kubernetes** **docker**

Bonfire

bonfire.com

Backend Java Developer

2019 - 2020

Bonfire is a design and technology company specializing in custom apparel. We help people sell shirts online, fundraise for a good cause, or simply order custom printed products direct.

Add features and fix bugs on the **REST** spring boot based backend and occasional work on the front.

Front: **angularjs**

Back: **java** **spring-boot** **hibernate** **postgresql**

VCS: **git**

Onebox

www.oneboxtds.com

Backend Java Developer

2019

Onebox is a comprehensive ticket distribution system for the live entertainment industry.

My main role was to extract and reimplement existing features of the **SpringMVC** monolith to new **REST** based **microservices**.

MS: **java** **spring-boot** **jooq** **OkHttp**

CI/CD: **git** **jenkins** **docker** **kubernetes**

Cloud: **aws**

Clorian

www.clorian.com

Fullstack Java Developer

2017 - 2019

Ticketing platform with over 8 million sold tickets per year.

Maintained and improved to the soon to be the legacy **SpringMVC** monolith.

While still maintaining the monolith we started to breakdown and migrate the existing features to **REST** based **microservices**.

After the main Android developer left, maintaining and feature implementations tasks for the app were assigned to me.

Back: **java** **spring-mvc** **spring-boot** **jsp** **mybatis** **hibernate** **redis** **retrofit**

Auth: **OAuth2** **JWT**

Front: **html** **jquery**

Android: **kotlin** **dagger-2** **reactiveX**

CI/CD: **git** **jenkins** **docker**

Cloud: **amazon-ecs** **amazon-sns** **amazon-sqs** **amazon-rds-aurora** **aws**

Ecomm360

Fullstack PHP Developer

2017

Prestashop Modules Development.

php **prestashop** **laravel-5** **mysql**

CONTECNOW

contecnow.com

Big data and analytics

2016 - 2017
